Mobile Device Manager & Profile Manager (Lion 303)

Course Summary

Description

This three-day course is designed to provide all of the knowledge necessary to support Lion Mobile Applications and Mass iOS Device Deployment. The course will cover everything needed to successfully create and manage security certificates, deploy and maintain iOS Mobile devices in a highly scalable fashion. Students will be able to demonstrate their new knowledge though 1:1 labs, specifically designed to enhance their learning experience. This course is ideally suited to provide the knowledge required to support a Mobile iOS Enterprise Deployment in an OS X Lion Server environment.

Audience

This course is designed for system administrators and IT professionals who need to:

- Gain specific knowledge about DNS, VPN, firewalls, certificates and proxy servers
- Effectively configure mobile devices that are connected to public networks to access services running on a private network
- Configure Mac OS X Server to provide trusted authentication to proxied services such as web, mail, and calendar

Prerequisites

Students should have the following prerequisite knowledge prior to attending the course:

- Basic troubleshooting experience or *Lion 101*
- Basic Mac OS X Server experience or *Lion 201*

Duration

Three days
