

Essbase Fundamentals Builder

Course Summary

Description

This course introduces students to essential building blocks of Analytic Services. Students will learn how to get started on developing effective and comprehensive applications, including how to use Administration Services to build multidimensional databases, load data, calculate data, and report on data. Special topics for Aggregated Storage databases and MDX Queries are also covered. This course is designed to jump-start any Analytic Services project that needs to begin cranking out applications fast. All material is logically broken down into concise topics and presented through lecture, practical examples, exercises, and discussion.

Prerequisites

There are no prerequisites required for this course.

Duration

Two days
