

EX336 JBoss Certified Application Administrator (JBCAA) Exam Course Summary

Description

The EX336 JBoss® Certified Application Administrator (JBCAA™) exam is the only performance-based certification in its category, continuing the Red Hat tradition of benchmarking the skills of IT professionals through hands-on skills assessments. Individuals earning the JBCAA credential will have the demonstrated skills and knowledge to install, configure, monitor, manage, and deploy applications to JBoss Enterprise Application Platform. A JBCAA credential helps ensure enterprise open source solutions are optimized to meet specific needs, and establishes credibility for companies needing to provide a high level of service to their customers.

Topics

- The certification exam consists of one part conducted in a single half-day session.
- The JBCAA exam consists of one section lasting up to four (4) hours.
- The exam is performance-based, meaning that candidates must perform tasks on a live system, rather than answering questions about how one might perform those tasks.
- Exam results are emailed within (5) business days following the exam.

Audience

This exam is appropriate for JBoss Application Server system administrators, deployment managers, and quality assurance engineers who would like to earn a credential that shows they have the skills and knowledge needed to install, configure, monitor, manage, and deploy applications to JBoss Enterprise Application Platform.

Prerequisites

The hands-on nature of this exam make real-world experiences a critical facet of preparation. In addition to experience, Red Hat recommends that participants attend the JB336 JBoss Application Administrator course to supplement their hands-on experience. JB336 balances concept-based lectures with real-world tasks and project-oriented labs.

Duration

One half day
