

MOC 20462 D Administering Microsoft SQL Server 2014 Databases

Course Summary

Description

This five-day instructor-led course provides students with the knowledge and skills to maintain a Microsoft SQL Server 2014 database. The course focuses on teaching individuals how to use SQL Server 2014 product features and tools related to maintaining a database.

This course is designed for customers who are interested in learning SQL Server 2012 or SQL Server 2014. It covers the new features in SQL Server 2014, but also the important capabilities across the SQL Server data platform.

Objectives

At the end of this course, students will be able to:

- Describe core database administration tasks and tools.
- Install and configure SQL Server 2014.
- Configure SQL Server databases and storage.
- Plan and implement a backup strategy.
- Restore databases from backups.
- Import and export data. Monitor SQL Server.
- Trace SQL Server activity.
- Manage SQL Server security.
- Audit data access and encrypt data.
- Perform ongoing database maintenance.
- Automate SQL Server maintenance with SQL Server Agent Jobs.
- Configure Database Mail, alerts and notifications.

Topics

- | | |
|---|--|
| • Introduction to SQL Server 2014 Database Administration | • Tracing SQL Server Activity |
| • Installing and Configuring SQL Server 2014 | • Managing SQL Server Security |
| • Working with Databases and Storage | • Auditing Data Access and Encrypting Data |
| • Planning and Implementing a Backup Strategy | • Performing Ongoing Database Maintenance |
| • Restoring SQL Server 2014 Databases | • Automating SQL Server 2014 Management |
| • Importing and Exporting Data | • Monitoring SQL Server 2014 by Using Alerts and Notifications |
| • Monitoring SQL Server 2014 | |

Audience

The primary audience for this course is individuals who administer and maintain SQL Server databases. These individuals perform database administration and maintenance as their primary area of responsibility, or work in environments where databases play a key role in their primary job.

MOC 20462 D Administering Microsoft SQL Server 2014 Databases

Course Summary (cont'd)

The secondary audience for this course is individuals who develop applications that deliver content from SQL Server databases.

Prerequisites

This course requires that you meet the following prerequisites:

- Basic knowledge of the Microsoft Windows operating system and its core functionality.
- Working knowledge of Transact-SQL.
- Working knowledge of relational databases.
- Some experience with database design.

Duration

Five days

MOC 20462 D Administering Microsoft SQL Server 2014 Databases

Course Outline

I. Introduction to SQL Server 2014 Database Administration

This module introduces the Microsoft SQL Server 2014 platform. It describes the components, editions, and versions of SQL Server 2014, and the tasks that a database administrator commonly performs for a SQL Server instance.

- A. Database Administration Overview
- B. Introduction to the SQL Server Platform
- C. Database Management Tools and Techniques

Lab : Using SQL Server Administrative Tools

II. Installing and Configuring SQL Server 2014

This module explains how to assess resource requirements for SQL Server 2014 and how to install it.

- A. Planning SQL Server Installation
- B. Installing SQL Server 2014
- C. Post-Installation Configuration

Lab : Installing SQL Server 2014

III. Working with Databases and Storage

This module describes how data is stored in databases, how to create databases, how to manage database files, and how to move them. Other tasks related to storage, include managing the tempdb database and using fast storage devices to extend the SQL Server buffer pool cache, are also discussed.

- A. Introduction to Data Storage with SQL Server
- B. Managing Storage for System Databases
- C. Managing Storage for User Databases
- D. Moving Database Files
- E. Configuring the Buffer Pool Extension

Lab : Managing Database Storage

IV. Planning and Implementing a Backup Strategy

In this module, you will consider how to create a backup strategy that is aligned with organizational needs, and learn how to perform the backup operations required by that strategy.

- A. Understanding SQL Server Recovery Models
- B. Planning a Backup Strategy
- C. Backing up Databases and Transaction Logs
- D. Using Backup Options
- E. Ensuring Backup Reliability

Lab : Backing Up SQL Server Databases

V. Restoring SQL Server 2014 Databases

In this module, you will see how to restore user and system databases and how to implement point-in-time recovery.

- A. Understanding the Restore Process
- B. Restoring Databases
- C. Advanced Restore Scenarios
- D. Working with Point-in-Time Recovery

Lab : Restoring SQL Server Databases

VI. Module 6: Importing and Exporting Data

In this module, you will briefly explore tools and techniques so that you can import and export data to and from SQL Server.

- A. Introduction to Transferring Data
- B. Importing and Exporting Table Data
- C. Copying or Moving a Database

Lab : Importing and Exporting Data

VII. Monitoring SQL Server 2014

This module explains how to use three of the most commonly used tools: Activity Monitor, dynamic management views and functions (DMVs and DMFs), and Performance Monitor.

- A. Introduction to Monitoring SQL Server
- B. Dynamic Management Views and Functions
- C. Performance Monitor

Lab : Monitoring SQL Server 2014

MOC 20462 D Administering Microsoft SQL Server 2014 Databases

Course Outline (cont'd)

VIII. Tracing SQL Server Activity

This module describes how to use SQL Server Profiler and SQL Trace stored procedures to capture information about SQL Server, and how to use that information to troubleshoot and optimize SQL Server workloads.

- A. Tracing SQL Server Workload Activity
- B. Using Traces

Lab : Tracing SQL Server Workload Activity

IX. Managing SQL Server Security

In this module, you will learn about the core concepts on which the SQL Server security architecture is based, and how to manage security at the server and database levels.

- A. Introduction to SQL Server Security
- B. Managing Server-Level Security
- C. Managing Database-Level Principals
- D. Managing Database Permissions

Lab : Managing SQL Server Security

X. Auditing Data Access and Encrypting Data

This module describes the available options for auditing in SQL Server, how to use and manage the SQL Server audit feature, and how to implement encryption.

- A. Auditing Data Access in SQL Server
- B. Implementing SQL Server Audit
- C. Encrypting Databases

Lab : Auditing Data Access and Encrypting Data

XI. Performing Ongoing Database Maintenance

This module describes common database maintenance tasks that a DBA must perform, and demonstrates how to automate these tasks using maintenance plans.

- A. Ensuring Database Integrity
- B. Maintaining Indexes
- C. Automating Routine Database Maintenance

Lab : Performing Ongoing Database Maintenance

XII. Automating SQL Server 2014 Management

This module describes how to use SQL Server Agent to automate jobs, how to configure security contexts for jobs, and how to implement multi-server jobs.

- A. Automating SQL Server Management
- B. Implementing SQL Server Agent Jobs
- C. Managing SQL Server Agent Jobs
- D. Managing Job Step Security Contexts
- E. Managing Jobs on Multiple Servers

Lab : Automating SQL Server Management

XIII. Monitoring SQL Server 2014 by Using Alerts and Notifications

This module covers the configuration of database mail, alerts, and notifications.

- A. Monitoring SQL Server Errors
- B. Configuring Database Mail
- C. Configuring Operators, Alerts, and Notifications

Lab : Monitoring SQL Server by Using Alerts and Notifications
