

User Story Workshop

Course Summary

Description

The User Story Workshop is a full-day workshop for Business Analysts, Product Owners, Team Members and anyone who will be involved in the writing of User Stories. The course focuses on how to gather Agile requirements and document them as User Stories. This is a very hands-on course and features many exercises that solidify key course concepts. Whenever possible real-world examples are brought in from the course participants work in order to jumpstart their next Agile project.

Objectives

At the end of this course, students will be able to:

- Define the basic concept of User Stories, so that I can understand how they fit within the agile process.
- Explore product vision statements, so that I can understand how to apply them to the story writing process.
- Demonstrate how to model roles and personas, so that I can ensure my stories are targeting the most valuable use cases.
- Understand what makes up a user story, so that I can use them to build a quality product.
- Define techniques for gathering stories, so that I can iteratively discover the "right" functionality for the product.
- Explain key elements of a good user story, so that I can create a better product backlog.
- Explore ways to refine a product backlog, so that I can identify the appropriate detail in my stories.
- Understand acceptance criteria, so that my user stories have a clear definition of done.
- Explore the concept of story mapping, so that I can use it to better understand and plan my backlog

Topics

- Learn to capture stakeholder business needs
- Produce effective User Stories
- Create better product backlogs
- Learn the method of story mapping for better User Stories
