Designing Dashboards Using Hyperion and Javascript

Course Summary

Description
This two-day course is designed for developers who will create customized dashboards using the Hyperion Interactive Reporting Object Model and JavaScript. The course uses a hands-on approach with numerous lab exercises.

Topics
- Build Dashboard applications using JavaScript
- Understand how to use the Hyperion IR Object Browser and Script Editor
- Use graphics and controls from the catalog
- Understand and use JavaScript syntax and functions
- Manipulate Interactive Reporting pivots tables, charts and reports

Audience
This course is designed for developers.

Prerequisites
Prior to taking this class, students should have:
- An understanding of JavaScript syntax
- Completed the Designing Queries & Reports course or have a thorough understanding of how to create queries and reports using Hyperion Interactive Reporting

Duration
Two days
