

MOC 20740 C: Installation, Storage, and Compute with Windows Server 2016

Course Summary

Description

This five-day course is designed primarily for IT professionals who have some experience with Windows Server. It is designed for professionals who will be responsible for managing storage and compute by using Windows Server 2016, and who need to understand the scenarios, requirements, and storage and compute options that are available and applicable to Windows Server 2016.

Objectives

After taking this course, students will be able to:

- Prepare and install Nano Server, a Server Core installation, and plan a server upgrade and migration strategy.
- Describe the various storage options, including partition table formats, basic and dynamic disks, file systems, virtual hard disks, and drive hardware, and explain how to manage disks and volumes.
- Describe enterprise storage solutions, and select the appropriate solution for a given situation.
- Implement and manage Storage Spaces and Data Deduplication.
- Install and configure Microsoft Hyper-V, and configure virtual machines.
- Deploy, configure, and manage Windows and Hyper-V containers.
- Describe the high availability and disaster recovery technologies in Windows Server 2016.
- Plan, create, and manage a failover cluster.
- Implement failover clustering for Hyper-V virtual machines.
- Configure a Network Load Balancing (NLB) cluster, and plan for an NLB implementation.
- Create and manage deployment images.
- Manage, monitor, and maintain virtual machine installations.

Topics

- Installing, upgrading, and migrating servers and workloads
- Configuring local storage
- Implementing enterprise storage solutions
- Implementing Storage Spaces and Data Deduplication
- Installing and configuring Hyper-V and virtual machines
- Deploying and managing Windows and Hyper-V containers
- Overview of high availability and disaster recovery
- Implementing failover clustering
- Implementing failover clustering with Windows Server 2016 Hyper-V
- Implementing Network Load Balancing
- Creating and managing deployment images
- Managing, monitoring, and maintaining virtual machine installations

MOC 20740 C: Installation, Storage, and Compute with Windows Server 2016

Course Summary (cont'd)

Audience

This course is intended for IT professionals who have some experience working with Windows Server, and who are looking for a single five-day course that covers storage and compute technologies in Windows Server 2016. This course will help them update their knowledge and skills related to storage and compute for Windows Server 2016.

Candidates suitable for this course would be Windows Server administrators who are relatively new to Windows Server administration and related technologies, and who want to learn more about the storage and compute features in Windows Server 2016. IT professionals with general IT knowledge who are looking to gain knowledge about Windows Server especially around storage and compute technologies in Windows Server 2016 would also find this course beneficial.

The secondary audience for this course is IT professionals looking to take the Microsoft 70-740 certification exam, Installation, Storage and Compute with Windows Server 2016.

Prerequisites

Before attending this course, students must have a basic understanding of networking fundamentals and an awareness and understanding of security best practices. Students should have an understanding of basic AD DS concepts and basic knowledge of server hardware. Experience supporting and configuring Windows client operating systems such as Windows 8 or Windows 10 is also necessary. Additionally, students would benefit from having some previous Windows Server operating system experience, such as experience as a Windows Server systems administrator.

Duration

Five days

MOC 20740 C: Installation, Storage, and Compute with Windows Server 2016

Course Outline

I. Installing, upgrading, and migrating servers and workloads

This module describes the new features of Windows Server 2016, and explains how to prepare for and install Nano Server and Server Core. This module also describes how to plan a server upgrade and migration strategy, and explains how to perform a migration of server roles and workloads within and across domains. Finally, this module explains how to choose an activation model based on your environment characteristics.

- A. Introducing Windows Server 2016
- B. Preparing and installing Server Core
- C. Preparing for upgrades and migrations
- D. Migrating server roles and workloads
- E. Windows Server activation models

Lab: Installing and configuring Server Core

- **Installing Server Core**
- **Completing post-installation tasks on Windows Server 2016 Core**
- **Performing remote management**

II. Configuring local storage

This module explains how to manage disks and volumes in Windows Server 2016.

- A. Managing disks in Windows Server
- B. Managing volumes in Windows Server

Lab: Configuring local storage

- **Creating and managing volumes**
- **Resizing volumes**
- **Managing virtual hard disks**

III. Implementing enterprise storage solutions

This module discusses direct-attached storage (DAS), network-attached storage (NAS), and storage area networks (SANs). It also explains the purpose of Microsoft Internet Storage Name Service (iSNS) Server, data center bridging (DCB), and Multipath I/O (MPIO). Additionally, this module compares Fibre Channel, Internet Small Computer System Interface (iSCSI), and Fibre Channel over Ethernet (FCoE), and describes how to configure sharing in Windows Server 2016.

- A. Overview of DAS, NAS, and SANs
- B. Comparing Fibre Channel, iSCSI, and Fibre Channel over Ethernet
- C. Understanding iSNS, DCB, and MPIO
- D. Configuring sharing in Windows Server 2016

Lab: Planning and configuring storage technologies and components

- **Planning storage requirements**
- **Configuring iSCSI storage**
- **Configuring and managing the share infrastructure**

IV. Implementing Storage Spaces and Data Deduplication

This module explains how to implement and manage Storage Spaces. This module also explains how to implement Data Deduplication.

- A. Implementing Storage Spaces
- B. Managing Storage Spaces
- C. Implementing Data Deduplication

Lab: Implementing Storage Spaces

- **Creating a Storage Space**
- Lab: Implementing Data Deduplication**
- **Installing Data Deduplication**
- **Configuring Data Deduplication**

V. Installing and configuring Hyper-V and virtual machines

This module provides an overview of Hyper-V and virtualization. It explains how to install Hyper-V, and how to configure storage and networking on Hyper-V host servers. Additionally, it explains how to configure and manage Hyper-V virtual machines.

- A. Overview of Hyper-V
- B. Installing Hyper-V
- C. Configuring storage on Hyper-V host servers
- D. Configuring networking on Hyper-V host servers
- E. Configuring Hyper-V virtual machines
- F. Managing virtual machines

Lab: Installing and configuring Hyper-V

- **Verify installation of the Hyper-V server role**
- **Configuring Hyper-V networks**
- **Creating and configuring virtual machines**
- **Enable nested virtualization for a virtual machine**

MOC 20740 C: Installation, Storage, and Compute with Windows Server 2016

Course Outline (cont'd)

VI. Deploying and managing Windows and Hyper-V containers

This module provides an overview of containers in Windows Server 2016. Additionally, this module explains how to deploy Windows Server and Hyper-V containers. It also explains how to install, configure, and manage containers by using Docker.

- A. Overview of containers in Windows Server 2016
- B. Deploying Windows Server and Hyper-V containers
- C. Installing, configuring, and managing containers by using Docker

Lab: Installing and configuring containers

- Installing and configuring Windows Server containers by using Windows PowerShell
- Installing and configuring Windows Server containers by using Docker

VII. Overview of high availability and disaster recovery

This module provides an overview of high availability and high availability with failover clustering in Windows Server 2016. It further explains how to plan high availability and disaster recovery solutions with Hyper-V virtual machines. Additionally, this module explains how to back up and restore the Windows Server 2016 operating system and data by using Windows Server Backup.

- A. Defining levels of availability
- B. Planning high availability and disaster recovery solutions with Hyper-V virtual machines
- C. Backing up and restoring by using Windows Server Backup
- D. High availability with failover clustering in Windows Server 2016

Lab: Planning and implementing a high availability and disaster recovery solution

- Determining the appropriate high availability and disaster recovery solution
- Implementing storage migration
- Configuring Hyper-V replicas

VIII. Implementing failover clustering

This module explains how to plan for failover clustering. It also explains how to create, manage, and troubleshoot a failover cluster.

- A. Planning a failover cluster
- B. Creating and configuring a new failover cluster
- C. Maintaining a failover cluster
- D. Troubleshooting a failover cluster
- E. Implementing site high availability with stretch clustering

Lab: Implementing failover clustering

- Creating a failover cluster
- Verifying quorum settings and adding a node

Lab: Managing a failover cluster

- Evicting a node and verifying quorum settings
- Changing the quorum from disk witness to file-share witness, and defining node voting
- Verifying high availability

IX. Implementing failover clustering with Windows Server 2016 Hyper-V

This module describes how Hyper-V integrates with failover clustering. It also explains how to implement Hyper-V virtual machines (VMs) in failover clusters.

- A. Overview of the integration of Hyper-V Server 2016 with failover clustering
- B. Implementing Hyper-V VMs on failover clusters
- C. Key features for VMs in a clustered environment

Lab: Implementing failover clustering with Windows Server 2016 Hyper-V

- Configure iSCSI storage
- Configuring a failover cluster for Hyper-V
- Configuring a highly available VM

X. Implementing Network Load Balancing

This module provides an overview of NLB clusters. It also explains how to plan and configure an NLB cluster implementation.

- A. Overview of NLB
- B. Configuring an NLB cluster
- C. Planning an NLB implementation

MOC 20740 C: Installation, Storage, and Compute with Windows Server 2016

Course Outline (cont'd)

Lab: Implementing NLB

- Implementing a Network Load Balancing (NLB) cluster
- Configuring and managing the NLB cluster
- Validating high availability for the NLB cluster

XI. Creating and managing deployment images

This module provides an overview of the Windows Server 2016 image deployment process. It also explains how to create and manage deployment images by using the Microsoft Deployment Toolkit (MDT). Additionally, it describes different workloads in the virtual machine environment.

- A. Introduction to deployment images
- B. Creating and managing deployment images by using MDT
- C. Virtual machine environments for different workloads

Lab: Using MDT to deploy Windows Server 2016

- Configuring MDT
- Creating and deploying an image

XII. Managing, monitoring, and maintaining virtual machine installations

This module provides an overview on Windows Server Update Services (WSUS) and the requirements to implement WSUS. It explains how to manage the update process with WSUS. Additionally, this module provides an overview of Windows PowerShell Desired State Configuration (DSC) and Windows Server 2016 monitoring tools. Finally, this module describes how to use Performance Monitor, and how to manage event logs.

- A. WSUS overview and deployment options
- B. Update management process with WSUS
- C. Overview of Windows PowerShell DSC
- D. Overview of Windows Server 2016 monitoring tools
- E. Using Performance Monitor
- F. Monitoring event logs

Lab: Implementing WSUS and deploying updates

- Implementing WSUS
- Configuring update settings
- Approving and deploying an update by using WSUS

Lab: Monitoring and troubleshooting Windows Server 2016

- Establishing a performance baseline
- Identifying the source of a performance problem
- Viewing and configuring centralized event logs
