

Business Analysis Overview

Course Summary

Description

Business Analysis Overview describes the role of the Business Analyst and examines many of the most common Business Analysis tools and practices. Participants are taught the nature of business analysis and the role of the BA; techniques used to define a proposed solution; stakeholder identification; and project requirements development, validation, and management. The importance of project Business Value optimization is emphasized throughout the class. The BA role in both waterfall and agile projects is discussed.

Objectives

By the end of this course, students will be able to:

- The value of Business Analysis
- Roles of the Business Analyst
- BA competencies
- Stakeholder identification and analysis
- Problem assessment and solution identification
