

VMware AirWatch: Configure and Deploy Integrated Solutions

Course Summary

Description

This two-day course will provide you with the skills required to configure and provision VMware AirWatch cloud deployments. It will cover the enablement of containerized applications, deployment and management of corporate email, and integration with enterprise resources. You will access hands-on labs and learn best practices for mobile deployment, with a focus on how to deploy and manage VMware AirWatch applications.

Objectives

After taking this course, students will be able to:

- Configure and provision cloud deployments
- Learn VMware AirWatch best practices for mobile deployments
- Integrate with enterprise resources by installing VMware Enterprise Systems Connector
- Enable containerized applications to securely connect with back-end resources through use of VMware Unified Access Gateway
- Deploy and manage corporate email through integration with Windows PowerShell or through the use of AirWatch Secure Email Gateway

Topics

- Enterprise Systems Connector
- Integrate and Configure with Directory Services
- Secure Mobile Devices with Certificates
- Unified Access Gateway
- AirWatch Secure Email Gateway
- Windows PowerShell Configuration
- Integrating with Android Enterprise
- Enrollment Options for Mobile Device Management
- Create Web, Application, and Device Kiosks
- Reports, Analytics, and Telecom Management
- VMware Identity Manager Overview
- AppConfig Community
- AirWatch Content Locker Advanced
- Next Steps

Audience

This course is designed for VMware AirWatch administrators, IT staff, sales engineers, consultants, support and help desk personnel, solutions architects, solutions engineers, and VMware AirWatch installers and implementation specialists.

Prerequisites

This course requires completion of the VMware AirWatch: Configure and Manage course.

Duration

Two days
