

Cloud Native Release Engineering

Course Summary

Description

Our cloud native release automation workshop shows you how to empower developers while meeting quality, compliance and security requirements. This workshop covers the principles of continuous integration and continuous delivery while providing hands on experiences in holistic, enterprise software development lifecycles.

Are your development teams struggling to fully embrace the changes needed to deliver quality software to production many times per day? Are you struggling to effectively onboard and empower your cloud native developers? These aren't uncommon challenges. While the platforms of today provide unprecedented levels of automation and convenience, roll out in the enterprise still leaves many unanswered questions and challenges.

Audience

This course is designed for developers and release process stakeholders (security, compliance, QA, etc.)

Duration

Three Days
