

Emerging Technologies

Course Summary

Description

This training class on Emerging Technologies is designed for those who prefer to develop the skills they need on their time and at their own pace.

You will be provided one year of access to the class and all supporting course material. This training will give you the ability to start, stop and rewind the chapters.

Audience

This course is designed for non-technical business executives who are tasked with making business decisions about emerging technologies in their businesses.

This course is NOT appropriate for technology professionals seeking to gain deeper understanding of these technology implementations or programming level depth. Since this is an overview course, this does not contain hands-on labs or programming exercises.
