

AZ-900T00 Microsoft Azure Fundamentals

Course Summary

Description

This one-day course will provide foundational level knowledge on core Azure concepts; core Azure services; core solutions and management tools; general security and network security; governance, privacy, and compliance features; Azure cost management and service level agreements.

Topics

- Describe cloud computing
- Describe the benefits of using cloud services
- Describe cloud service types
- Describe the core architectural components of Azure
- Describe Azure compute and networking services
- Describe Azure storage services
- Describe Azure identity, access, and security
- Describe cost management in Azure
- Describe features and tools in Azure for governance and compliance
- Describe features and tools for managing and deploying Azure resources
- Describe monitoring tools in Azure

Audience

This course is suitable for IT personnel who are just beginning to work with Azure. This audience wants to learn about our offerings and get hands-on experience with the product. This course primarily uses the Azure portal to create services and does not require scripting skills. Students in this course will gain confidence to take other role-based courses and certifications, such as Azure Administrator. This course provides an Azure pass and optional lab environment. This course combines lecture, demonstrations, and hands-on labs. This course will also help prepare someone for the AZ-900 exam.

Prerequisites

There are no prerequisites for taking this course. Familiarity with cloud computing is helpful, but isn't necessary.

Duration

One day

AZ-900T00 Microsoft Azure Fundamentals

Course Outline

I. Describe cloud computing

This module introduces you to cloud computing. It covers things such as cloud concepts, deployment models, and understanding shared responsibility in the cloud.

- A. Define cloud computing.
- B. Describe the shared responsibility model.
- C. Define cloud models, including public, private, and hybrid.
- D. Identify appropriate use cases for each cloud model.
- E. Describe the consumption-based model.
- F. Compare cloud pricing models.

II. Describe the benefits of using cloud services

This module introduces you to the benefits cloud computing can offer you or your organization.

- A. Describe the benefits of high availability and scalability in the cloud.
- B. Describe the benefits of reliability and predictability in the cloud.
- C. Describe the benefits of security and governance in the cloud.
- D. Describe the benefits of manageability in the cloud.

III. Describe cloud service types

This module covers the different cloud service types and shares some of the use cases and benefits aligned with each service type.

- A. Describe Infrastructure as a Service (IaaS).
- B. Describe Platform as a Service (PaaS).
- C. Describe Software as a Service (SaaS).
- D. Identify appropriate use cases for each cloud service (IaaS, PaaS, SaaS).

IV. Describe the core architectural components of Azure

This module explains the basic infrastructure components of Microsoft Azure. You'll learn about the physical infrastructure, how resources are managed, and have a chance to create an Azure resource.

- A. Describe Azure regions, region pairs, and sovereign regions
- B. Describe Availability Zones

- C. Describe Azure datacenters
- D. Describe Azure resources and Resource Groups
- E. Describe subscriptions
- F. Describe management groups
- G. Describe the hierarchy of resource groups, subscriptions, and management groups

V. Describe Azure compute and networking services

This module focuses on some of the computer services and networking services available within Azure.

- A. Compare compute types, including container instances, virtual machines, and functions
- B. Describe virtual machine (VM) options, including VMs, Virtual Machine Scale Sets, availability sets, Azure Virtual Desktop
- C. Describe resources required for virtual machines
- D. Describe application hosting options, including Azure Web Apps, containers, and virtual machines
- E. Describe virtual networking, including the purpose of Azure Virtual Networks, Azure virtual subnets, peering, Azure DNS, VPN Gateway, and ExpressRoute
- F. Define public and private endpoints

VI. Describe Azure storage services

This module introduces you to storage in Azure, including things such as different types of storage and how a distributed infrastructure can make your data more resilient. Compare Azure storage services

- A. Describe storage tiers
- B. Describe redundancy options
- C. Describe storage account options and storage types
- D. Identify options for moving files, including AzCopy, Azure Storage Explorer, and Azure File Sync
- E. Describe migration options, including Azure Migrate and Azure Data Box

AZ-900T00 Microsoft Azure Fundamentals

Course Outline (cont'd)

VII. Describe Azure identity, access, and security

This module covers some of the authorization and authentication methods available with Azure.

- A. Describe directory services in Azure, including Azure Active Directory (AD) and Azure AD DS
- B. Describe authentication methods in Azure, including single sign-on (SSO), multifactor authentication (MFA), and passwordless
- C. Describe external identities and guest access in Azure
- D. Describe Azure AD Conditional Access
- E. Describe Azure Role Based Access Control (RBAC)
- F. Describe the concept of Zero Trust
- G. Describe the purpose of the defense in depth model
- H. Describe the purpose of Microsoft Defender for Cloud

VIII. Describe cost management in Azure

This module explores methods to estimate, track, and manage costs in Azure.

- A. Describe factors that can affect costs in Azure
- B. Compare the Pricing calculator and Total Cost of Ownership (TCO) calculator
- C. Describe Azure Cost Management Tool
- D. Describe the purpose of tags

IX. Describe features and tools in Azure for governance and compliance

This module introduces you to tools that can help with governance and compliance within Azure.

- A. Describe the purpose of Azure Blueprints
- B. Describe the purpose of Azure Policy
- C. Describe the purpose of resource locks
- D. Describe the purpose of the Service Trust portal

X. Describe features and tools for managing and deploying Azure resources

This module covers tools that help you manage your Azure and on-premises resources.

- A. Describe Azure portal
- B. Describe Azure Cloud Shell, including Azure CLI and Azure PowerShell
- C. Describe the purpose of Azure Arc
- D. Describe Azure Resource Manager (ARM) and Azure ARM templates

XI. Describe monitoring tools in Azure

This module covers tools that you can use to monitor your Azure environment.

- A. Describe the purpose of Azure Advisor
- B. Describe Azure Service Health
- C. Describe Azure Monitor, including Azure Log Analytics, Azure Monitor Alerts, and Application Insights
