Advanced RACF Administration

Course Summary

Description

This course is designed to introduce the student to the more advanced features of IBM's Resource Access Control Facility (RACF).

Topics

- The topics would include:
- RACF Remote Sharing Facility (RRSF)
- Unix System Services (USS)
- Encryption and Certificates
- CICS - advanced topics

- Console commands
- Securing DB2
- RACF Subsystem
- RACF database backups

Audience

This course is designed for security managers, RACF security administrators or auditors.

Prerequisites

Students should have some familiarity with RACF. Also, since RACF runs under the OS/390 MVS operating system, some basic familiarity with that environment is helpful.

Duration

Three days

RACFPD
