FileNet BPM 4.0 Administration

Course Summary

Description

This course teaches experienced system administrators the skills required to implement, administer, and maintain an IBM FileNet P8 4.0 Business Process Manager system.

Objectives
At the end of this course, students will be able to:

- Create BPM infrastructure including isolated region, queues, rosters, and event logs
- Customize BPM structures and integrate process components
- Perform BPM Web Services configuration
- Perform BPM system maintenance and administrative tasks
- Perform BPM system performance tuning

Topics

- Review P8 and BPM architecture and components
- Create isolated region, queues, rosters, and event logs
- Manage isolation region security
- Process Orchestration and Web Services configuration
- Integration with external systems via component steps
- Manage and maintain workflows in process
- Perform daily, weekly, and monthly administrative tasks
- Performance tuning

Audience

The course material assumes experience in system administration and working knowledge of FileNet P8 or completion of a P8 administration training course. The audience for this course should be technical in nature.

Prerequisites

- Basic operating system administration skills
- Must have attended the FileNet P8 4.0 Administration course prior to attending this course or equivalent experience
- Experience working with computers and Networks

Duration

Five days & ½ day setup
