

Project Management Bootcamp

Course Summary

Description

Leading any project can be a challenge, especially if you're new to project management. This seminar will help you make the transition to solid project leadership. Project Management Bootcamp teaches you the concepts and techniques necessary to manage a technical project. This seminar closely follows the Project Management Institute's (PMI®) Project Management Body of Knowledge (PMBOK® Guide) and shows how to apply these best practices to a typical small to medium sized software project.

While this course is in alignment with the PMBOK® Guide – Fifth Edition, it is not a PMP Preparation course. The purpose of this course is to help attendees understand how to use the standard PMI processes to actually manage a project.

Objectives

At the end of this course, students will be able to:

- Plan, execute, control, and close-out a medium sized (up to 10 staff and up to 12 calendar months duration) software project.

Topics

- Introduction and fundamentals of managing a technical project
- Scope and Risk management
- Time and Schedule management
- HR & Communications management
- Procurement and Cost management
- Quality and Integration management

Audience

This program will be useful to people who are asked to lead projects. Whether you are currently a project manager and want an overview of key project management practices, or whether you are soon to become a project manager (some shops call them "leads"), this seminar will be of great benefit. It is particularly applicable to those who have general project management experience, but want more exposure to project management best practices.

Duration

Five days
