

RH134 Red Hat System Administration II

Course Summary

Description

Focuses on the key tasks needed to become a full-time Linux administrator

Red Hat System Administration II (RH134) builds upon and lends context to the foundational knowledge established in Red Hat System Administration I (RH124). This follow-on course demonstrates more detailed use cases for Red Hat® Enterprise Linux®, preparing you for the Red Hat Certified System Administrator exam (EX200). This course is based on Red Hat Enterprise Linux 8.

Objectives

At the end of this course, students will be able to:

- Install Red Hat Enterprise Linux using scalable methods
- Access security files, file systems, and networks
- Execute shell scripting and automation techniques
- Manage storage devices, logical volumes, and file systems
- Manage security and system access
- Control the boot process and system services

Topics

- Improve command line productivity
- Schedule future tasks
- Tune system performance
- Control access to files with ACLs
- Manage SELinux security
- Maintain basic storage
- Manage logical volumes
- Implement advanced storage features
- Access network-attached storage
- Control the boot process
- Manage network security
- Install Red Hat Enterprise Linux

Audience

This course is geared toward Windows system administrators, network administrators, and other system administrators who are interested in supplementing current skills or backstopping other team members, in addition to Linux system administrators who are responsible for these tasks:

- Configuring, installing, upgrading, and maintaining Linux systems using established standards and procedures
- Providing operational support
- Managing systems for monitoring system performance and availability
- Writing and deploying scripts for task automation and system administration

Prerequisites

Successful completion of Red Hat System Administration I (RH124) is recommended. Experienced Linux administrators seeking to accelerate their path toward becoming a Red Hat Certified System Administrator should start with the RHCSA Rapid Track course (RH199).

Duration

Four days

RH134 Red Hat System Administration II

Course Outline

I. Improve command line productivity

- A. Run commands more efficiently by using advanced features of the bash shell, shell scripts, and various utilities provided by Red Hat Enterprise Linux.

II. Schedule future tasks

- A. Schedule commands to run in the future, either one time or on a repeating schedule.

III. Tune system performance

- A. Improve system performance by setting tuning parameters and adjusting scheduling priority of processes.

IV. Control access to files with ACLs

- A. Interpret and set access control lists (ACLs) on files to handle situations requiring complex user and group access permissions.

V. Manage SELinux security

- A. Protect and manage the security of a server by using SELinux.

VI. Maintain basic storage

- A. Create and manage storage devices, partitions, file systems, and swap spaces from the command line.

VII. Manage logical volumes

- A. Create and manage logical volumes containing file systems and swap spaces from the command line.

VIII. Implement advanced storage features

- A. Manage storage using the Stratis local storage management system and use VDO volumes to optimize storage space in use.

IX. Access network-attached storage

- A. Use the NFS protocol to administer network-attached storage.

X. Control the boot process

- A. Manage the boot process to control services offered and to troubleshoot and repair problems.

XI. Manage network security

- A. Control network connections to services using the system firewall and SELinux rules.

XII. Install Red Hat Enterprise Linux

- A. Install Red Hat Enterprise Linux on servers and virtual machines.
